Before installation, read these instructions and the enclosed safety instructions carefully and completely.

Information on putting into/out of service, function setting and maintenance can be found in the instructions for the main unit.

1 General

The connection module (ASM) is plugged onto SHEVS control centres/controls (main units) with spacer bolts and connected to them via a ribbon cable. The settings are made via the menu of the main unit. Depending on the type of the main unit, different settings are available.

After installation, the *option ASM 101*, as a fix component of the main unit, forwards selectable system messages via two outputs. It also has an input for a potential-free contact (NO or NC) for processing external messages.

2 Technical data

General

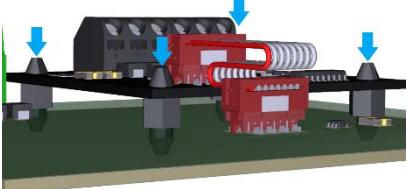

Type	ASM 101
Board lettering	O3-1...
Part number	8139 0080 0000
Storage/operating conditions:	
• Temperature	-5 °C ... +40 °C
• Relative humidity	20 % ... 80 %, non-condensing
Dimensions (W x H x D)	55 x 55 x 18 mm
Input	
Input for potential-free contact (NO or NC)	24 V==, fuse via output 1
Outputs	
Output 1 and 2	24 V==/250 mA, fuse 350 mA each
The requirements of the Directives 2014/35/EU and 2014/30/EU are met.	

3 Installation

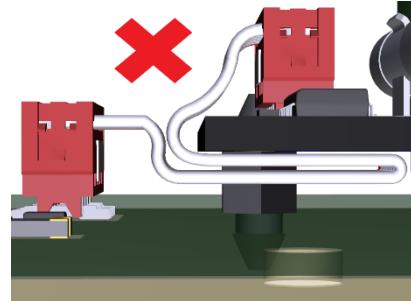

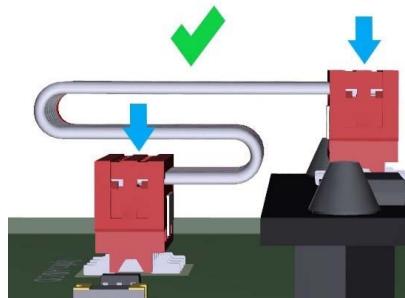

**When installing and removing the option, the main unit must be de-energised.
For this purpose, first disconnect the battery supply (if present)
and secondly the mains supply.**

1. Plug

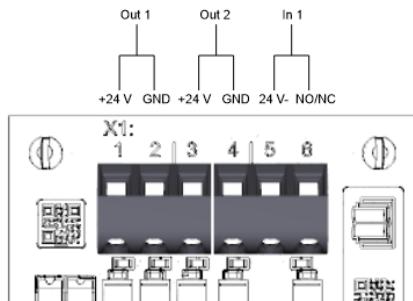

2. Connect

Do not twist the cable or push it between the option and the main board.

3. Wire
